

Biography

My name is Louis Machin, I am a software engineer based in Wiltshire. I am self-taught and have been programming from a young age, starting with PASCAL. In my free time I develop abstract business software for various use cases, predominantly for the logistics and healthcare sectors. I like to work with restrictions as it promotes out-of-the-box thinking and an opportunity to learn new technologies.

Work Experience

Technical Lead at CareMeds Ltd.

Jan 2023

- Management of all software development and delivery
- Responsible for technical infrastructure and planning
- Training and guidance for junior developer(s)
- Responsible as Data Protection Officer for UK GDPR compliance

Lead Automation Developer at CareMeds Ltd.

Jun 2019 - Dec 2022

- Lead developer for automation software
- Designing and writing software for pharmaceutical robots
- Integrating with cloud-based eMARs
- Writing software to comply with UK, French, and German medical SOPs
- Designing intuitive user-interfaces to be used in an efficiency critical pharmacy environment

Application Support Analyst at Import Services Ltd.

Oct 2017 - May 2019

- Provide application support services (WMS and Output Management)
- Support the ongoing software and process lifecycle
- Implement change within the software and process development framework
- Design and development of a process monitoring system for proactive error management
- Management of EDI for Amazon vendors such as Melissa and Doug, Srixon and KNEX

Education

Maths, Further Maths, and CompSci A-levels at Peter Symonds College

2015 - 2017

- Achievement in the British Informatics Olympiad 2016
- Achievement in the Cipher Challenge 2016

Object-Oriented Java Programming at IBM

Jun 2016

- Learning the fundamentals of Java programming
- Learning a basic overview of the object-oriented programming paradigm

Technologies used

Languages: Ruby/Rails, JavaScript, TypeScript, Pascal, Delphi, Java, Python 3

Industry Standards: EDIFACT, ASC X12, ZPL, dm+d

Other: Git, MySQL, HTML5, CSS3, Docker, Electron.js, Node.js, p5.js, Express.js, Firebase, React Native, Sinatra

Hobbies and skills gained

Hackathons

- Creating interesting and unique projects in a short time-frame
- Learning new technologies that I wouldn't usually have the opportunity to learn

EDI research and development

- Learning about the current changes and difficulties with various EDI standards and integrations
- Developing solutions to these issues

Personal projects

My GitHub repository: <https://github.com/louismachin>

Libris Adepti - An archive of esoteric media.

(<https://librisadepti.com>)

An attempt to archive and share esoteric media, as well as learn more about content delivery:

- Originally an Express.js web server, being rewritten using Ruby Sinatra.
- Originally using both AWS S3 for storage and AWS SNS for SMS notifications, moved to self-hosted solutions for cost reduction.

Rummy - A concatenative interpreted programming language.

To learn more about what goes into designing and making a programming language - I have made my own based on the deque data structure.

Shukra Software Ltd. - Bespoke software solutions for businesses.

In my spare time, I develop and host solutions for businesses, predominantly pharmacies, to help them better manage their workflows. I'm also currently developing an eMAR and care planning solution.

Stuart Inman - A portfolio for accomplished surrealist artist.

(<https://stuartinman.co.uk>)

This is a good example of a custom webpage I have designed and hosted for someone. It includes custom content management to suit their use case.

Jyotish - A library to calculate astronomical & astrological values.

(<https://github.com/louismachin/jyotish>)

I have an interest in astrology and this is an exploration in the mathematics behind it. I can calculate a full Western or Vedic chart as well as solar, lunar, planetary, and Pluto positions to a high degree without any software dependencies.
